

Gehring Transport System – for workpiece transport through the process chain

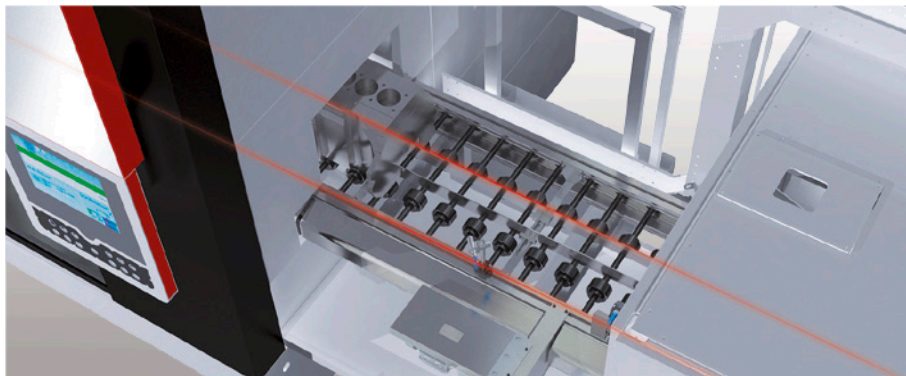

In order to realize simplifications in the process chain of the Gehring honing machines, a new Gehring transport system was developed. We can offer you a quick and uncomplicated handling by design, manufacturing and assembling from one single source. Regardless of weight and the size of the incoming parts, we can offer you a fitting solution. A conveyor with an lowering unit ensures rapid transport of your parts. Since we can offer all of the components from one single source, we can also optimally match these to your requirements.

Pre-control unit

Gehring emptying station – to minimize the spillage of coolant

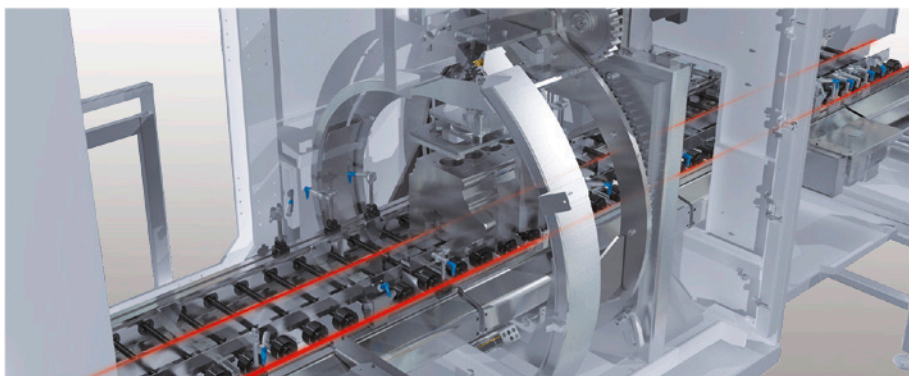

The new Gehring emptying station largely removes the coolant from your parts. The supply of this system from Gehring makes it easier for you to integrate this, simplifies the design and the process flow for your parts. Our emptying stations are specially designed for the cleaning of engine blocks and are an ideal addition to our transport systems. The linked systems that we offer, in addition to the transport option, is the optimal solution to minimize the spillage of coolant.

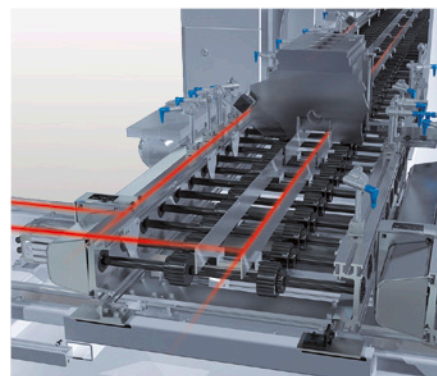

Conveyor between the honing machines

Gehring loading and unloading systems - Interface to the customer's transport system

To facilitate the handling of parts, Gehring offers a specially developed loading and unloading system. Take advantage of our transport system and use this high flexibility for your serial production. To ensure the quality our SPC Shuttle allows safe sampling during operation. We complement our existing product portfolio with different options in the field of automation and provide you under the motto "Total Customer Care" everything from one single source.
